Professional framing will use an archival properly cut mat, taped and sealed rear and glass front.

A layered TIF template (downloadable from [www.luminere.com.au/training](http://www.luminere.com.au/training)) lets you easily paste your photographs into the correct size and shape for both printing on a Fuji Frontier Minilab (your free print vouchers) and for the framing.

Orland will demonstrate how to use this template during the training course!

Photoshop screen-grab: the hatched area represents the "hole" into which you paste your photograph. This will ensure correct layout and scaling for the frame.
